

Claims:

1. (Amended) A process for the isolation of the a particulate pharmaceutical product from a high pressure, for example supercritical, process which process comprises the isolation of ~~the~~ a particulate pharmaceutical product as a suspension in a non-supercritical fluid.
2. (Amended) A particulate pharmaceutical product, which product has been isolated from a high pressure, for example supercritical, process as a suspension in a non-supercritical fluid.
3. (Amended) An apparatus for the isolation of the a pharmaceutical product ~~of from~~ a high pressure, for example supercritical, process, which apparatus comprises a means for the introduction of a non-supercritical fluid into one or more particle formation vessels, one or more collection vessels with a means of controlling the temperature and pressure of said collection vessels, and optionally a homogenisation vessel located between the particle formation vessel(s) and the collection vessels.
4. ~~(Cancelled) A product obtainable by isolation from a high pressure, for example supercritical, process as a suspension in a non-supercritical fluid.~~
- 5-10. (Previously cancelled)
11. (Amended) A particulate pharmaceutical product according to claim 4 2 which product has been isolated from a high pressure for example supercritical, process as a suspension which consists of one or more components which have been prepared by a particle formation process as described, with one or more components that have been prepared in a different way, and introduced into the described process by charging as powders.

12. (Amended) A~~n~~ process as described in claim 1 which process facilitates continuous or semi-continuous formation and isolation of pharmaceutical products from a high pressure, for example supercritical process.
